Project Work and Seminar:-

- ❖ **Video Forgery Detection Using Machine Learning** (Project)
In this project we detect forged videos by using machine learning algorithms. By using GLCM feature this system will classify the frame into different cluster on the basis of feature extraction and by using SVM method this system will generate the output as the image is forged or not.
- ❖ **Prediction Of Crop Yield Using Machine Learning** (seminar)
This crop prediction methodology is used to predict the suitable crop by sensing various parameter of soil and also parameter related to atmosphere.
- ❖ **Implementation Of Encryption And Decryption For Image And Text Document** (Mini Project)
In this project sender image encrypted and send to the receiver. Receiver receive image and decrypted the image using secret key.
